Contents

- What is OPC and OPC UA?
 - Short Introduction
- OPC UA Examples in LabVIEW
 - OPC UA Server
 - OPC UA Clients (Write/Read)

Software – LabVIEW 2017 or newer

You need the following Software:

- LabVIEW
- LabVIEW OPC UA Toolkit

Note! The **LabVIEW OPC UA Toolkit** contains the OPC UA API that was formerly part of the LabVIEW Datalogging and Supervisory Control (DSC) Module and the LabVIEW Real-Time Module. From the 2017 release, the LabVIEW OPC UA Toolkit becomes a standalone product. The LabVIEW DSC Module and the LabVIEW Real-Time Module no longer contain the OPC UA API

All LabVIEW Software can be downloaded from: www.ni.com/download

Example

LabVIEW Application #1

Read Data from OPC UA Server

LabVIEW Application #3

Write Data to OPC UA Server

LabVIEW Application #2

In this Example LabVIEW Application #1, #2 and #3 are on the same computer. Normally they are located on different computers or devices in a Network.

What is OPC UA?

Hans-Petter Halvorsen

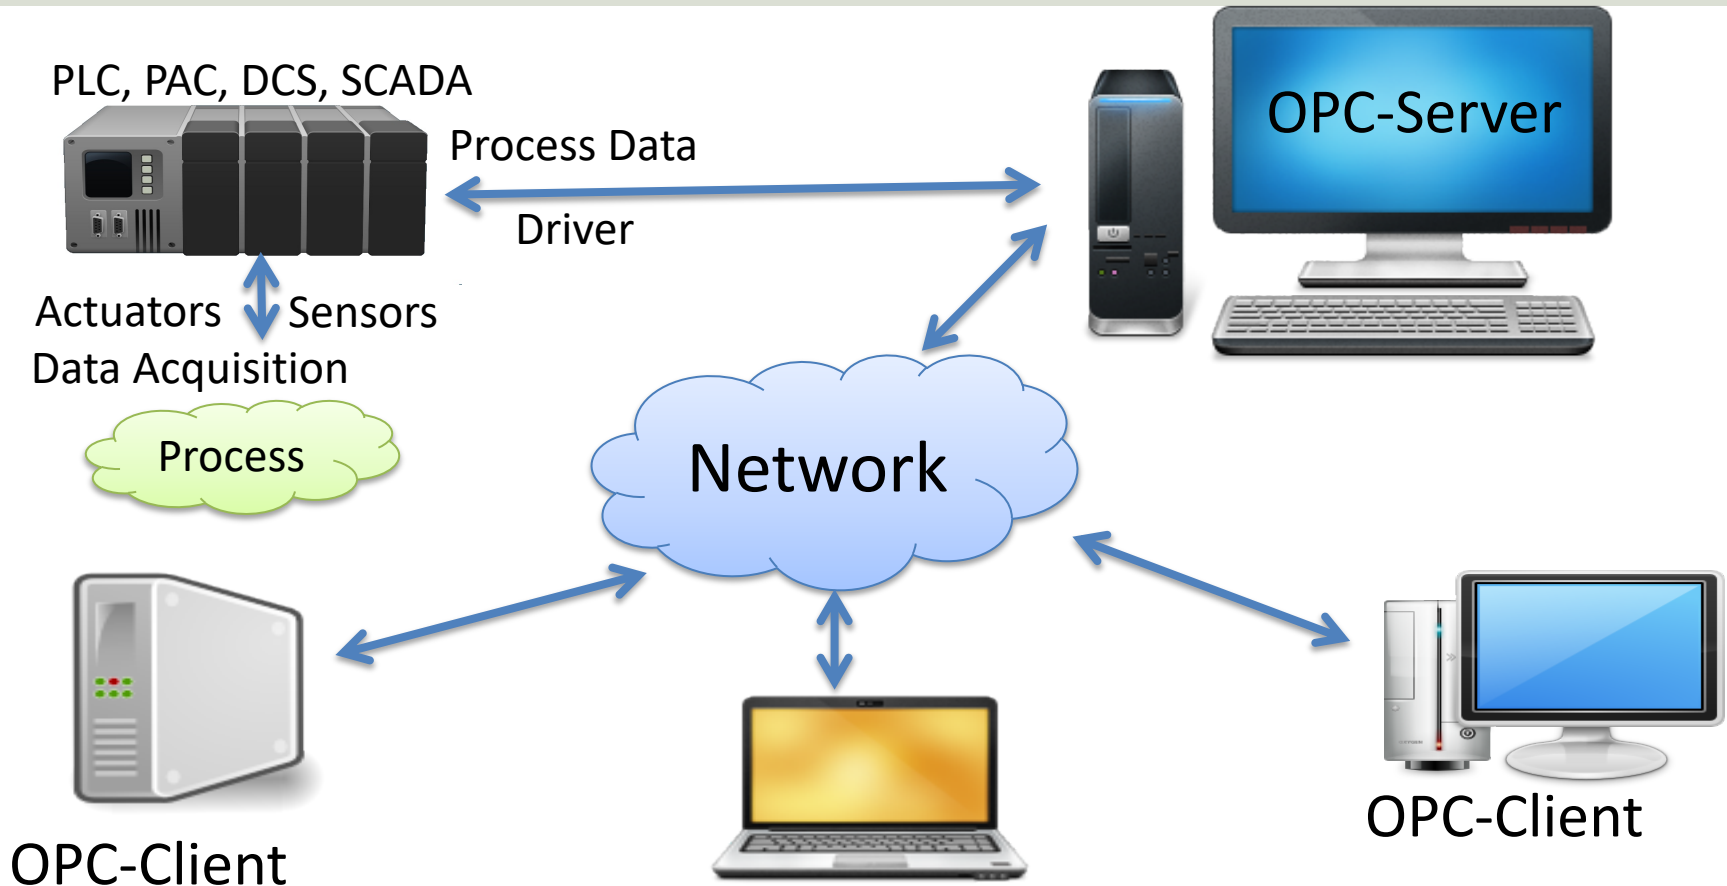

What is OPC?

- A standard that defines the communication of data between devices from different manufactures
- Requires an **OPC server** that communicates with the **OPC clients**
- OPC allows “plug-and-play”, gives benefits as reduces installation time and the opportunity to choose products from different manufactures
- Different standards: “Real-time” data (**OPC DA**), Historical data (**OPC HDA**), Alarm & Event data (**OPC AE**), etc.

OPC Server and Client(s)

Typical OPC Scenario

OPC Specifications

“Classic” OPC

“Next Generation” OPC

OPC DA

OPC HDA

OPC A&E

OPC UA

... (Many others)

OPC UA

- UA – Unified Architecture
- The Next Generation OPC
- Cross Platform. “Classic” OPC works only for Windows
- Based on Modern Software/Network Architecture (No DCOM problems!)
- It makes it easier to transmit and receive data in a modern data network/Internet

Next Generation OPC

COM/DCOM

OPC Classic

Next Generation OPC

XML, HTTP, SOAP

OPC UA

Specifications

OPC DA

OPC HDA

OPC A&E

Windows only

Cross-platform
Windows, Linux, Mac,
Embedded, VxWorks

All specifications
collected in one (DA,
HDA, A&E)

Protocols: "UA Binary" or "UA XML"

Simpler!!

Next Generation OPC

To open DCOM through firewalls demanded a large hole in the firewall!
Impossible to route over Internet!

No hole in firewall (UA XML) or just a simple needle stick (UA Binary) is necessary
Easy to route over Internet!

Classic OPC vs. OPC UA

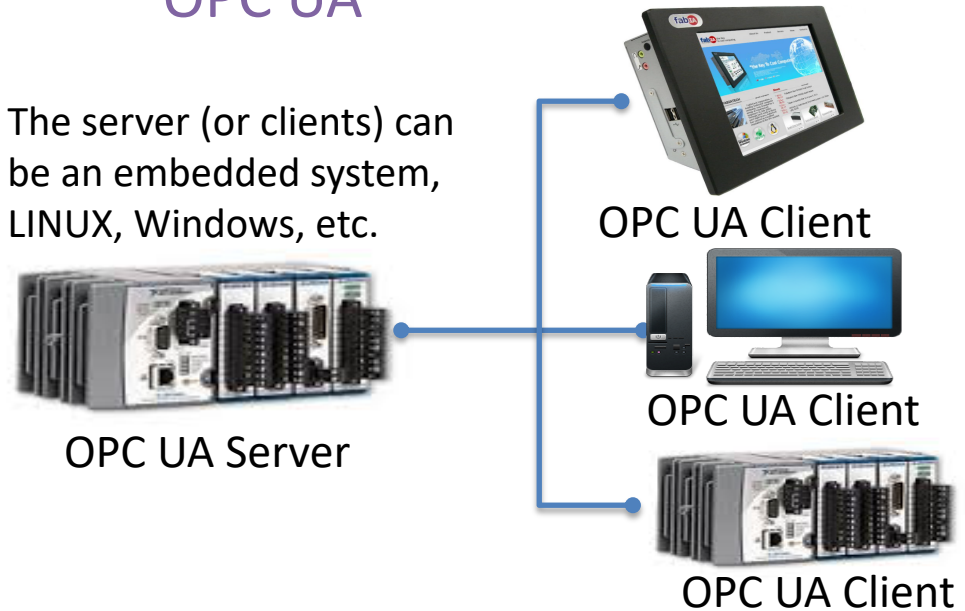

Classic OPC (DCOM)

OPC UA

The server (or clients) can be an embedded system, LINUX, Windows, etc.

Classic OPC requires a Microsoft Windows operating system to implement COM/DCOM server functionality. By utilizing SOA and Web Services, OPC UA is a platform-independent system that eliminates the previous dependency on a Windows operating system. By utilizing SOAP/XML over HTTP, OPC UA can deploy on a variety of embedded systems regardless of whether the system is a general purpose operating system, such as Windows, or a deterministic real-time operating system.

Example

LabVIEW Application #1

Read Data from OPC UA Server

Write Data to OPC UA Server

LabVIEW Application #2

In this Example LabVIEW Application #1, #2 and #3 are on the same computer. Normally they are located on different computers or devices in a Network.

LabVIEW Application #3

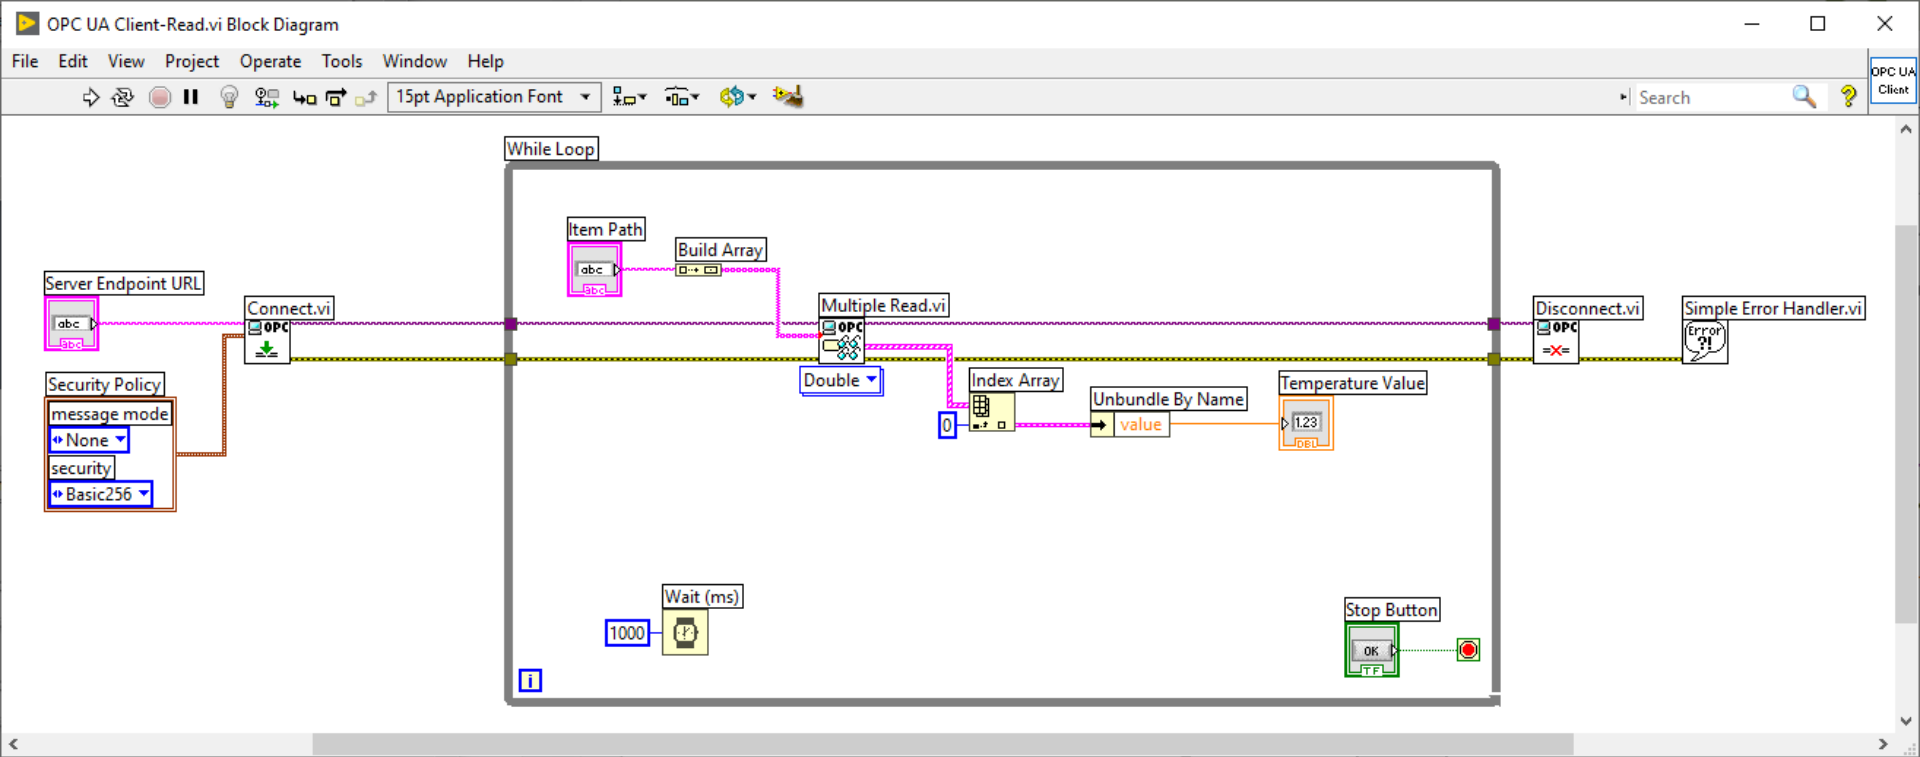

OPC UA Client Read Data

The image displays two LabVIEW windows side-by-side. The left window, titled 'OPC UA Server.vi', has a menu bar with 'File', 'Edit', 'View', 'Project', 'Operate', 'Tools', 'Window', and 'Help'. Below the menu bar are icons for Run, Copy, Stop, and Pause. The main area contains two text input fields: 'Server Endpoint URL' with the value 'opc.tcp://XPS15HPH:49580' and 'Item Node Id' with the value 'ns=2;s=Process Data.Temperature'. A red square stop button is located at the bottom right of the window.

The right window, titled 'OPC UA Client-Read.vi', also has a menu bar with 'File', 'Edit', 'View', 'Project', 'Operate', 'Tools', 'Window', and 'Help'. It includes icons for Run, Copy, Stop, and Pause, along with a help icon. The main area contains three text input fields: 'Server Endpoint URL' with the value 'opc.tcp://XPS15HPH:49580', 'Item Path' with the value 'Process Data.Temperature', and 'Temperature Value' with the value '22'. A red square stop button with the text 'Stop' is located at the bottom right of the window.

Using **OPC UA Toolkit**
with LabVIEW 2017 or newer
